

## INEC STATES DATABASE CONSOLIDATION

March, 2012.

### SERVER UPGRADE – COMPLETED AT INEC – HEADQUARTERS

2

The Server Upgrade Process involves the upgrade of the standard supplied Dell Power Edge R410 Server to achieve 8TB of HDD, 64GB of RAM and 2 QUAD CORE Processor using the component of one Machine A to upgrade another Machine B.

## DATA CONSOLIDATION PROCESS

2

1. Category 1 (page 2 - 15 )  
States **without** consolidation
2. Category 2 (page 16 - 25 )  
States **with** consolidation

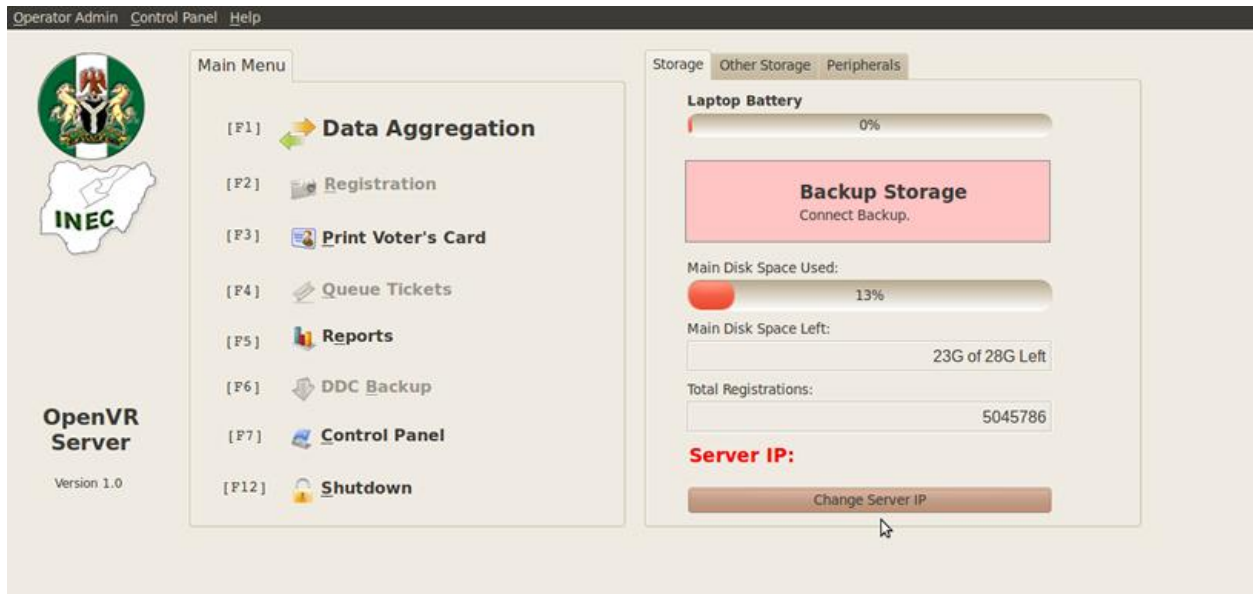

# STATES WITHOUT CONSOLIDATION

-1

## KEY PROCESSES (ON UPGRADED SERVER A)

### 1. Configure the IP Address as the first destination Server

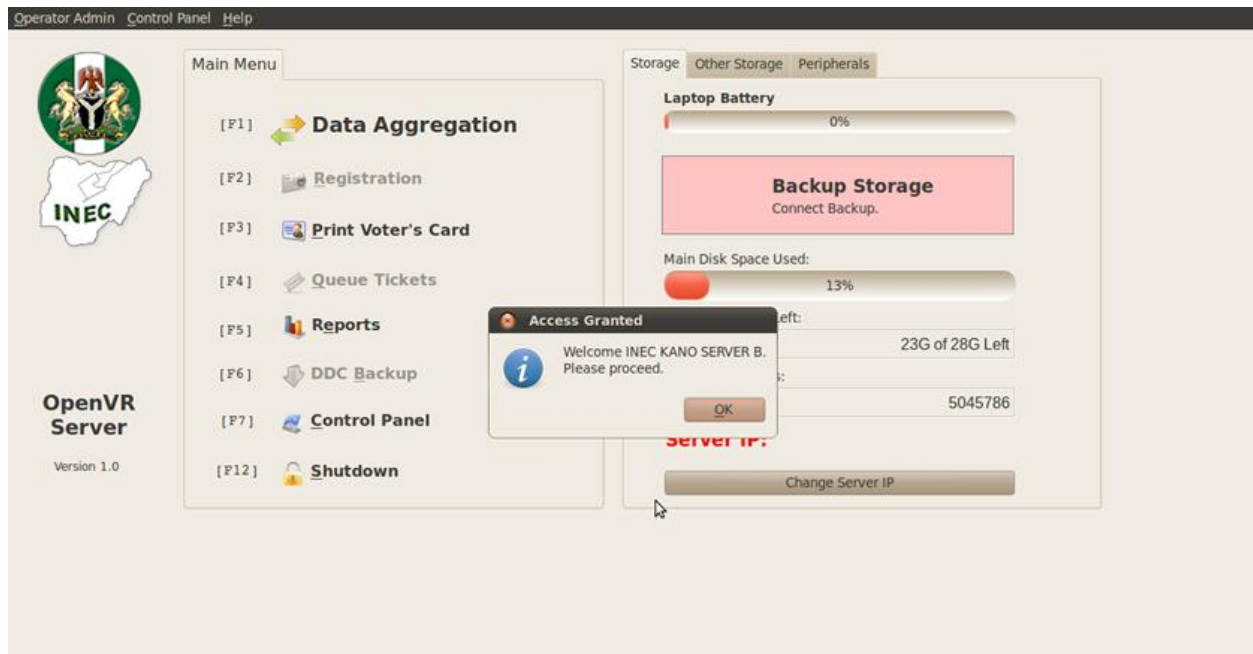

- Connect your cross cable to the state OpenVR Server and Upgraded Server A
- From the OpenVR Server Interface Click on **Change Server IP**  
(ON UPGRADED SERVER A)

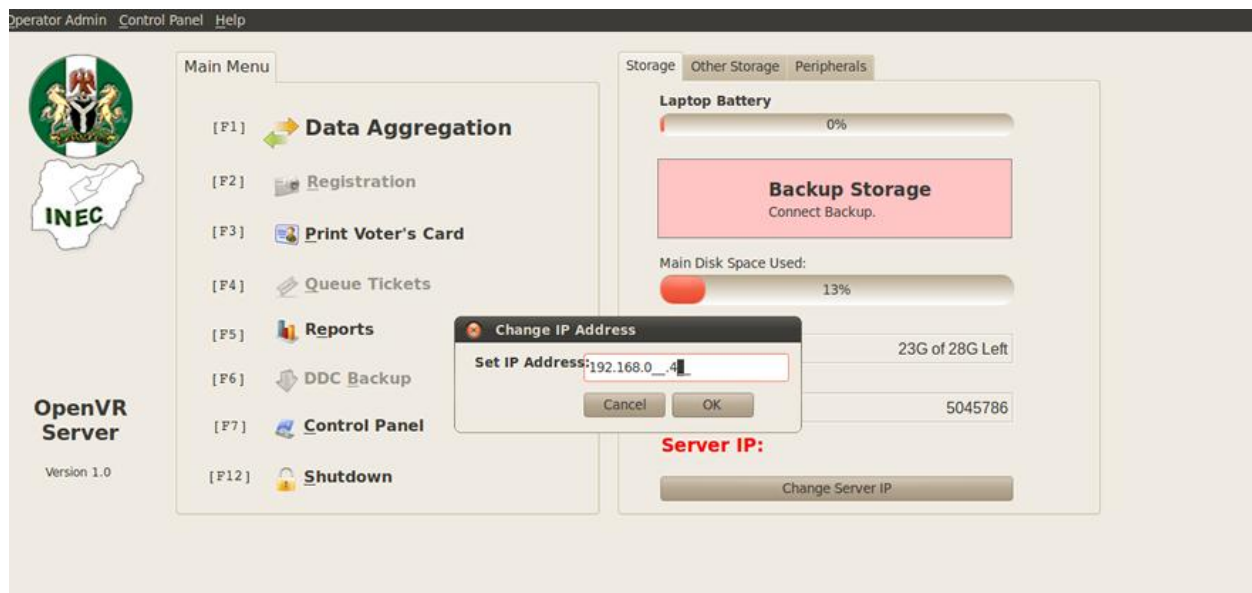

- Enter The Admin ID and password given to you.

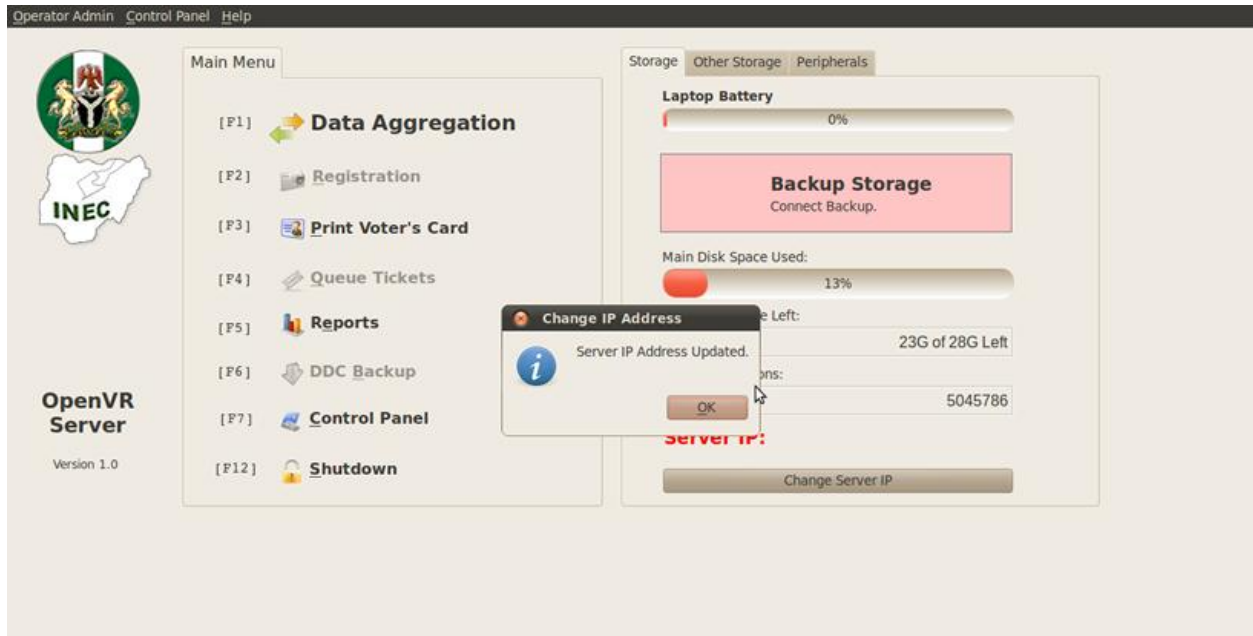

- If correct, you will see a Access Granted dialog box, ok it. Otherwise enter the correct Admin ID and or password.

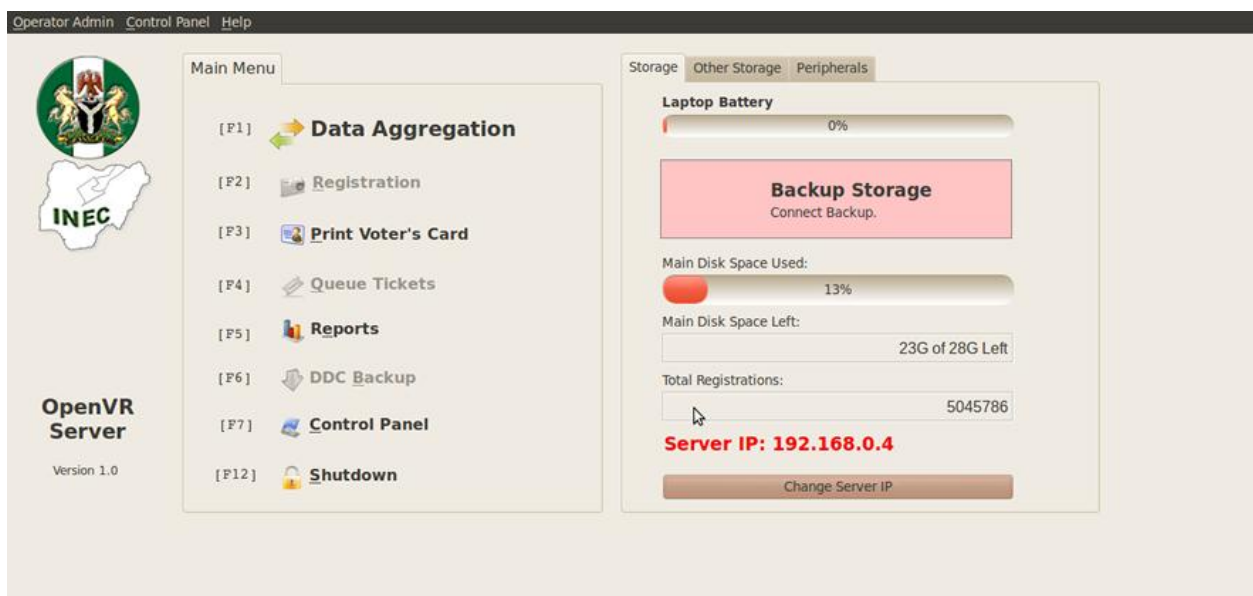

- Set the IP address to 192.168.0.4 and press ok button.

- A dialogue box will show “Server IP Address Updated”, ok it.

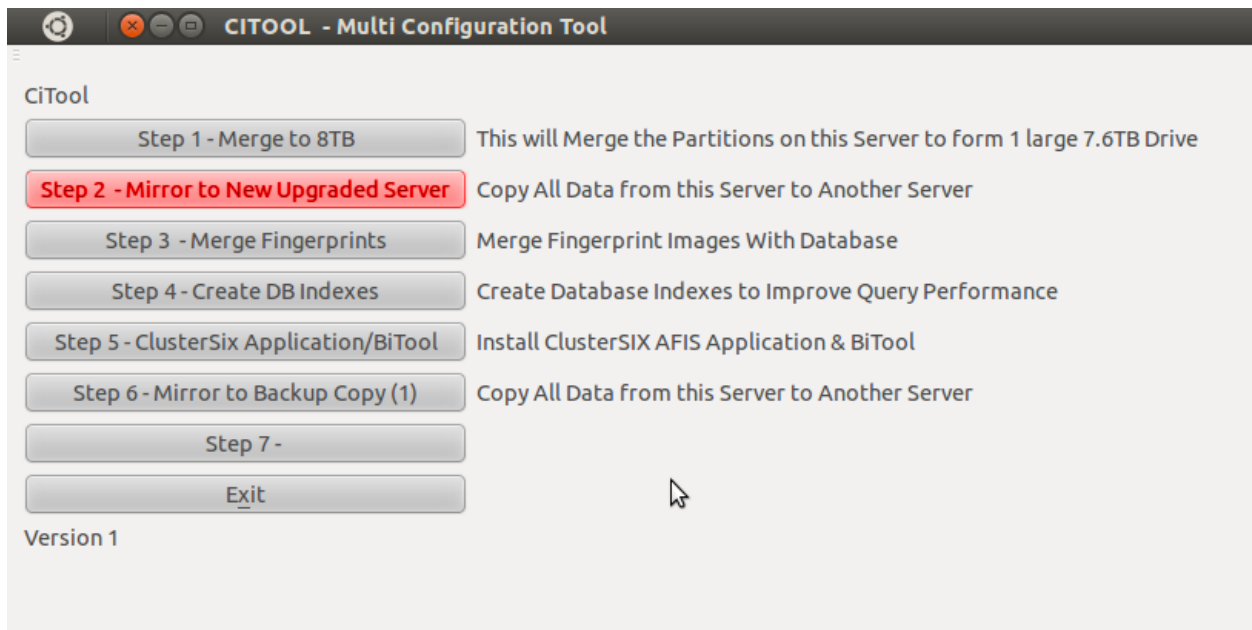

- Confirm that the Server IP address will automatically change. If shown proceed to the next stage.

## 2. Mirror Data From the State OpenVR to Upgraded Server A (using the CiTool)

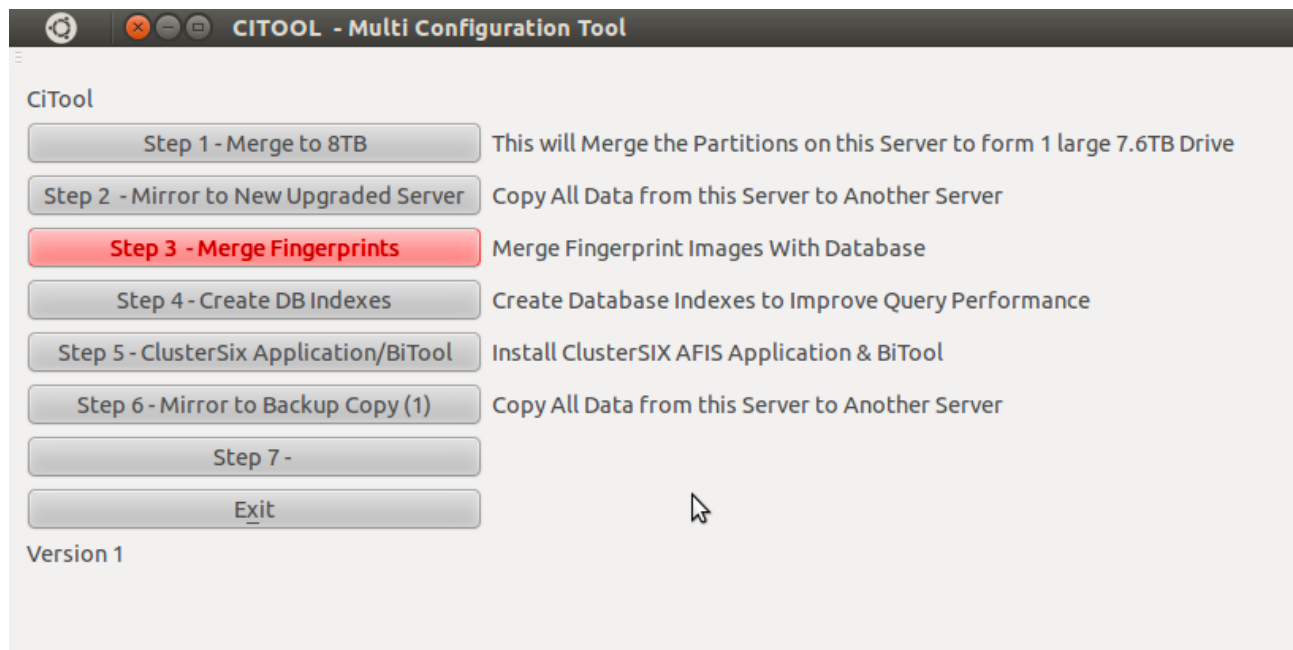

- Connect your Hard Drive that contains the SmartConsolidate Folder to the **State OpenVR Server**
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “**Step 2 – Mirror to New Upgraded Server**”
- A prompt will request you to hit the Enter key to continue
- Confirm that the transfer is atleast 50mbps
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close
- To confirm if it has mirrored successfully go the the destination Server and reboot the server.
- After reboot it will automatically show you exactly the total registered voters as that of the state OpenVR server displayed on the opevr interface.

(ON STATE OPENVR SERVER)

3. Merge FingerPrints Data on the Upgraded Server A (using the CiTool)
  - Login to the Upgraded Server A
  - Connect your Hard Drive that contains the SmartConsolidate Folder
  - Wait for it to automatically open
  - Navigate to the folder SmartConsolidate
  - Double Click on “citool”
  - Click “Step 3 – Merge Fingerprints”
  - A prompt will request you to hit the Enter key to continue
  - Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

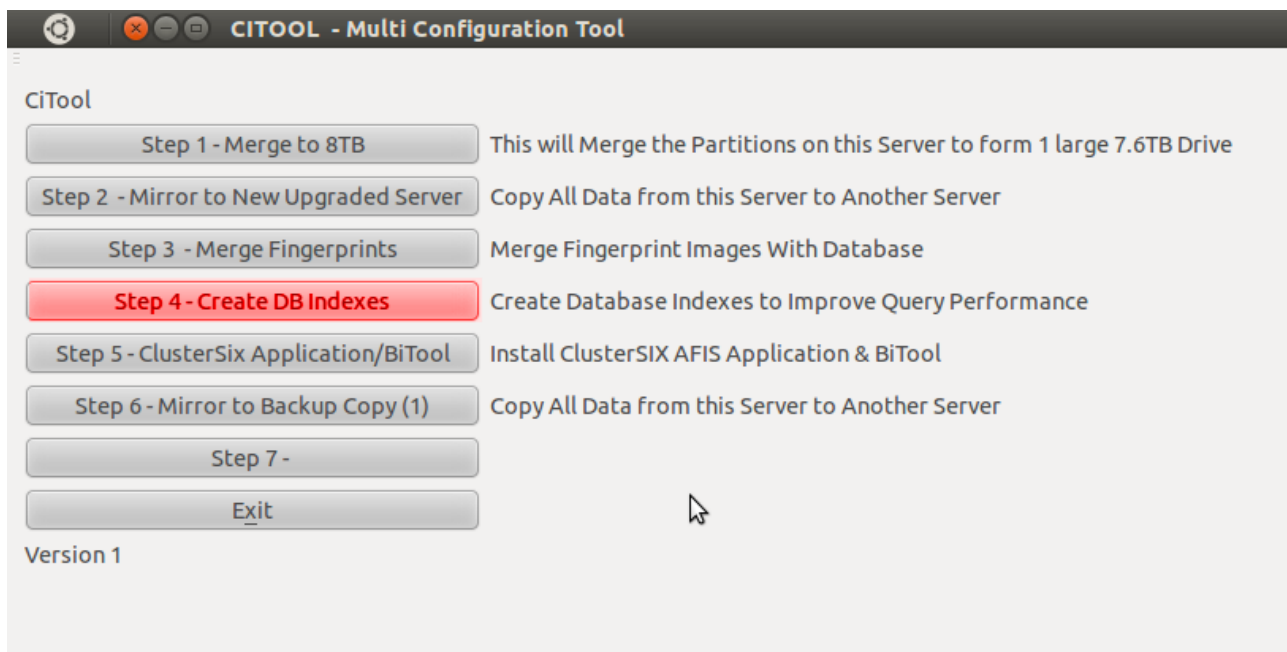

### (ON UPGRADED SERVER A)

#### 4. Create Database Indexes on the Upgraded Server A (using the CiTool)

- Alt+tab to navigate to the a window that your hard drive is connected to
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 4 – Create DB indexes”
- A prompt will request you to hit the Enter key to continue
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

(ON UPGRADED SERVER A)

#### 5. Salvage and Migrate Data for PU's with Zero registrant to the Upgraded Server A (using the OpenVR Server Interface)

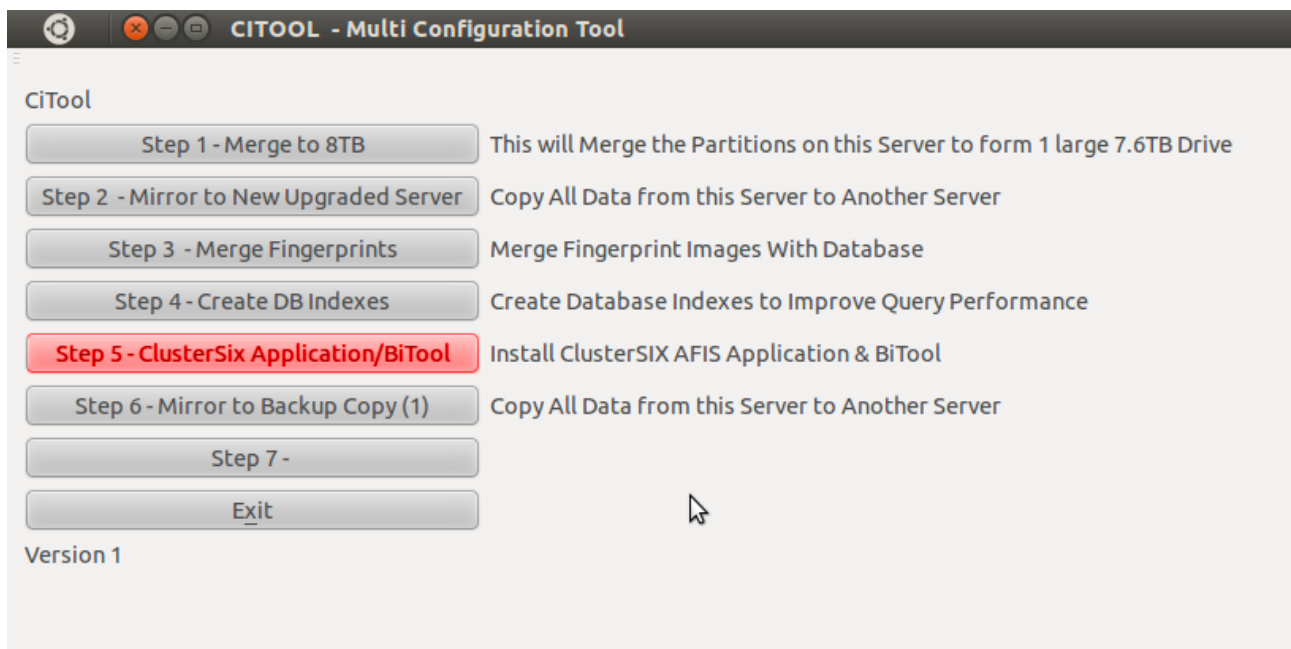

- From the Generated PU Aggregation Report sort and identify PU's with zero registrant
- Search for the laptops and migrate the data either through Server Dump to a Hard drive or via the network.
- Copy or Import using Openvr Server Interface
- Consolidate using Openvr Server Interface
- Repeat Step 3 only, as detailed above.

- Reboot the Server

6. Installation of ClusterSix Application/BI tool on the Upgraded Server A (using the CiTool)
  - Connect your Hard Drive that contains the SmartConsolidate Folder
  - Wait for it to automatically open
  - Navigate to the folder SmartConsolidate
  - Double Click on “citool”
  - Click “Step 5 – ClusterSix Application/BI Tool”
  - A prompt will request you to hit the Enter key to continue
  - Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

(ON UPGRADED SERVER A)

# STATES WITHOUT CONSOLIDATION

## KEY PROCESSES (ON UPGRADED SERVER B)

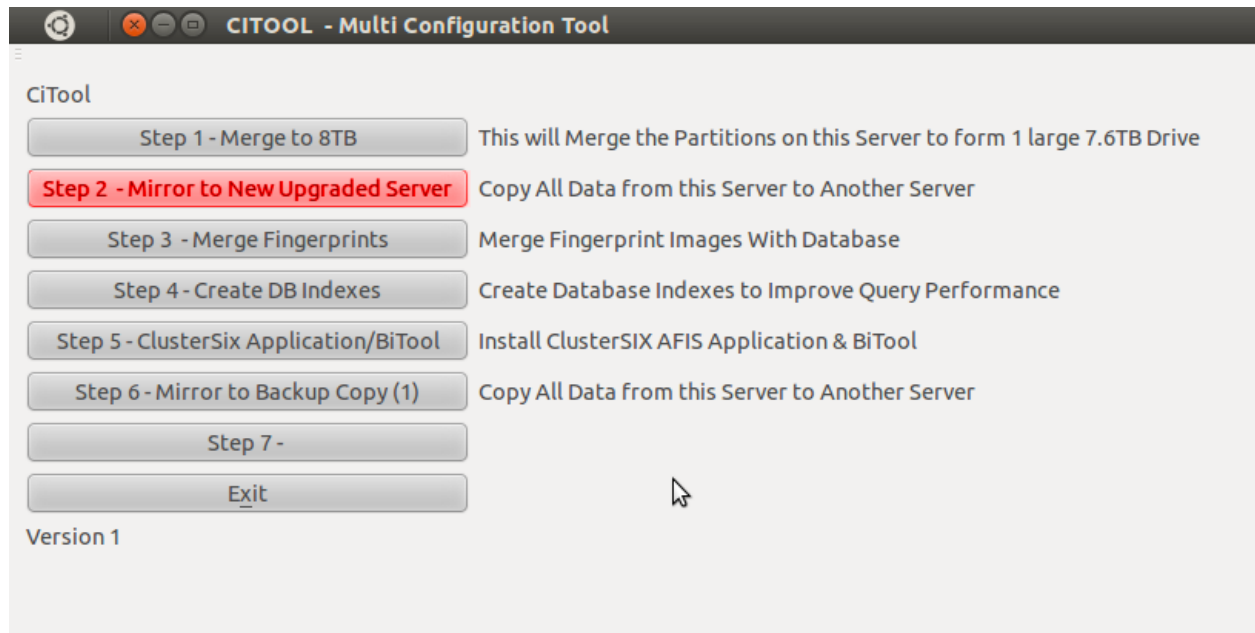

### 1. Configure the IP Address as the Second destination Server

- Configure the IP address on the Upgraded Server B as shown above in Configuring IP Address using OPenVR Interface

### 2. Mirror Data From the Upgraded Server A to Upgraded Server B (using the CiTool)

- Connect your Hard Drive that contains the SmartConsolidate Folder to the Upgraded Server A
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 2 – Mirror to New Upgraded Server”
- A prompt will request you to hit the Enter key to continue
- Confirm that the transfer is atleast 50mbps
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close
- To confirm if it has mirrored successfully go the the destination Server and reboot the server.
- After reboot it will automatically show you exactly the total registered voters as that of the Upgraded server A displayed on the opevr interface.

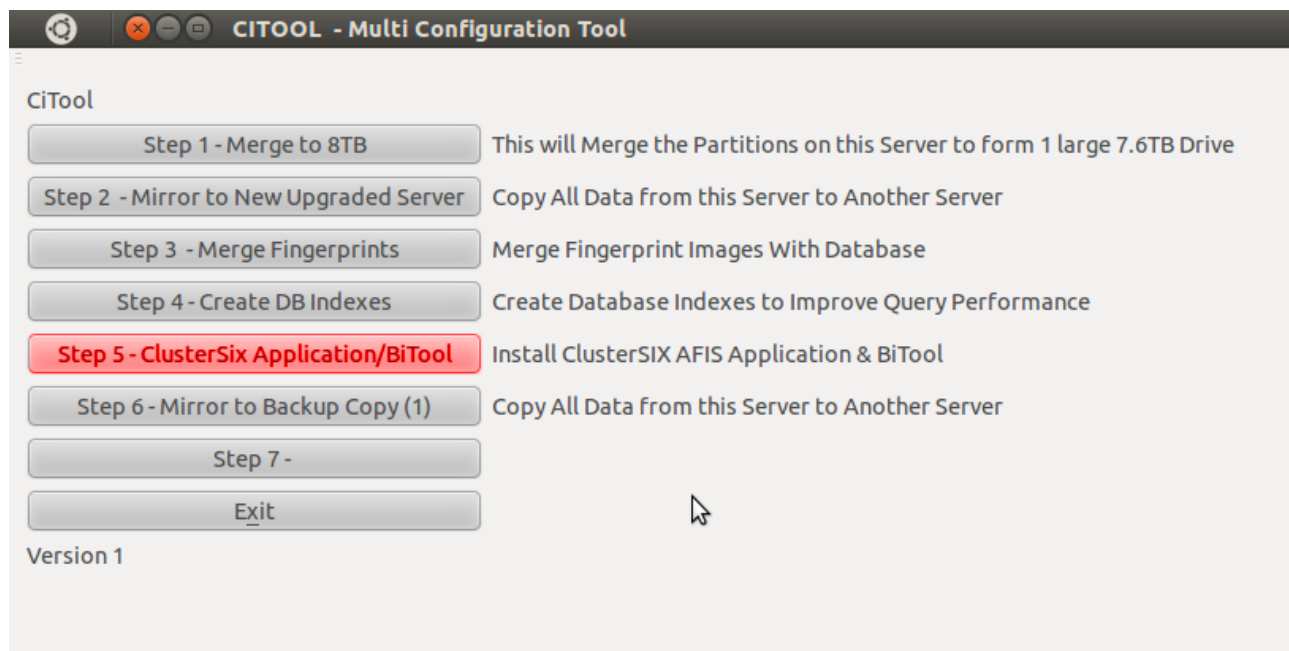

## (ON UPGRADED SERVER A)

### 3. Installation of ClusterSix Application/BI tool on the Upgraded Server B (using the CiTool)

- Installation of ClusterSix Application/BI tool on the Upgraded Server B (using the CiTool)
- Connect your Hard Drive that contains the SmartConsolidate Folder
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 5 – ClusterSix Application/BI Tool”
- A prompt will request you to hit the Enter key to continue
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

(ON UPGRADED SERVER B)

## KEY PROCESSES (ON UPGRADED SERVER C)

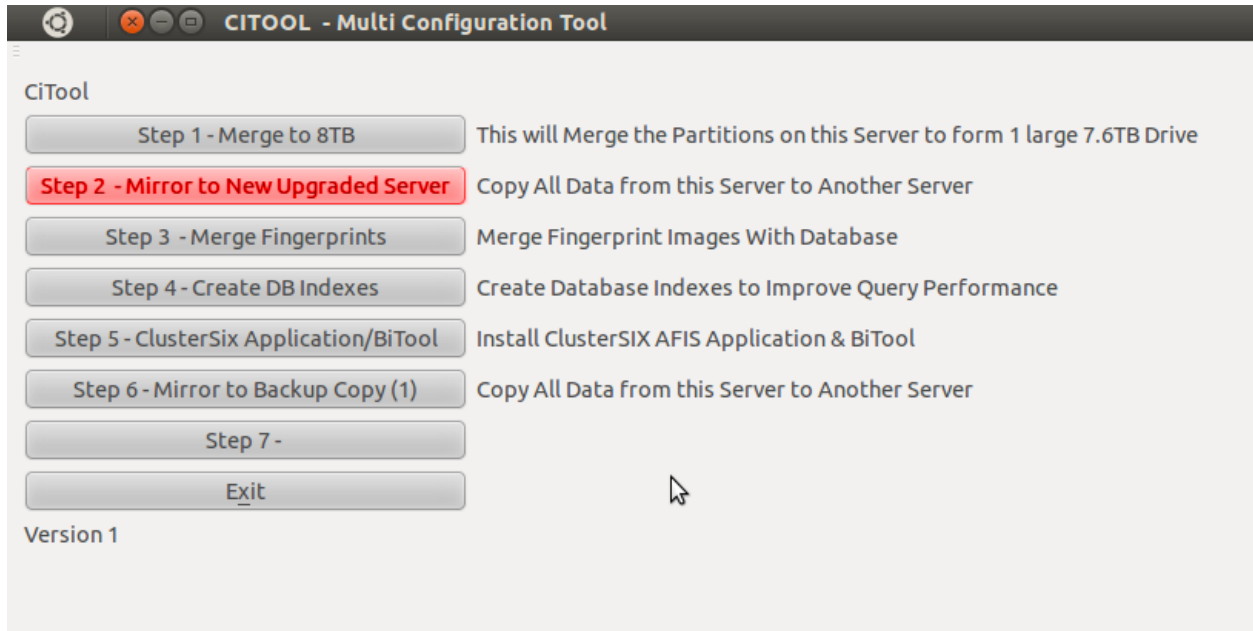

### 1. Configure the IP Address as the Second destination Server

- Configure the IP address on the Upgraded Server C as shown above in Configuring IP Address using OPenVR Interface

### 2. Mirror Data From the Upgraded Server A to Upgraded Server C (using the CiTool)

- Connect your Hard Drive that contains the SmartConsolidate Folder to the Upgraded Server A
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 2 – Mirror to New Upgraded Server”
- A prompt will request you to hit the Enter key to continue
- Confirm that the transfer is atleast 50mbps
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close
- To confirm if it has mirrored successfully go the the destination Server and reboot the server.
- After reboot it will automatically show you exactly the total registered voters as that of the Upgraded server A displayed on the opevr interface.

## (ON UPGRADED SERVER A)

### 3. Installation of ClusterSix Application/BI tool on the Upgraded Server C (using the CiTool)

- Installation of ClusterSix Application/BI tool on the Upgraded Server C (using the CiTool)
- Connect your Hard Drive that contains the SmartConsolidate Folder
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 5 – ClusterSix Application/BI Tool”
- A prompt will request you to hit the Enter key to continue
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

### KEY PROCESSES (ON UPGRADED SERVER A)

1. Generate PU Aggregation on the Upgraded Server A (using the OpenVR Interface)
  - From the Generated PU Aggregation Report sort and identify PU's with zero registrant
  - Search for the laptops and migrate the data either through Server Dump to a Hard drive or via the network.
  - Copy or Import using Openvr Server
  - Consolidate using Openvr Server
  - Reboot the Server
2. Configure the IP Address as the first destination Server
  - Configure the IP address on the Upgraded Server A as shown above in Configuring IP Address using OPenVR Interface

### 3. Login to the **Archive Server**.

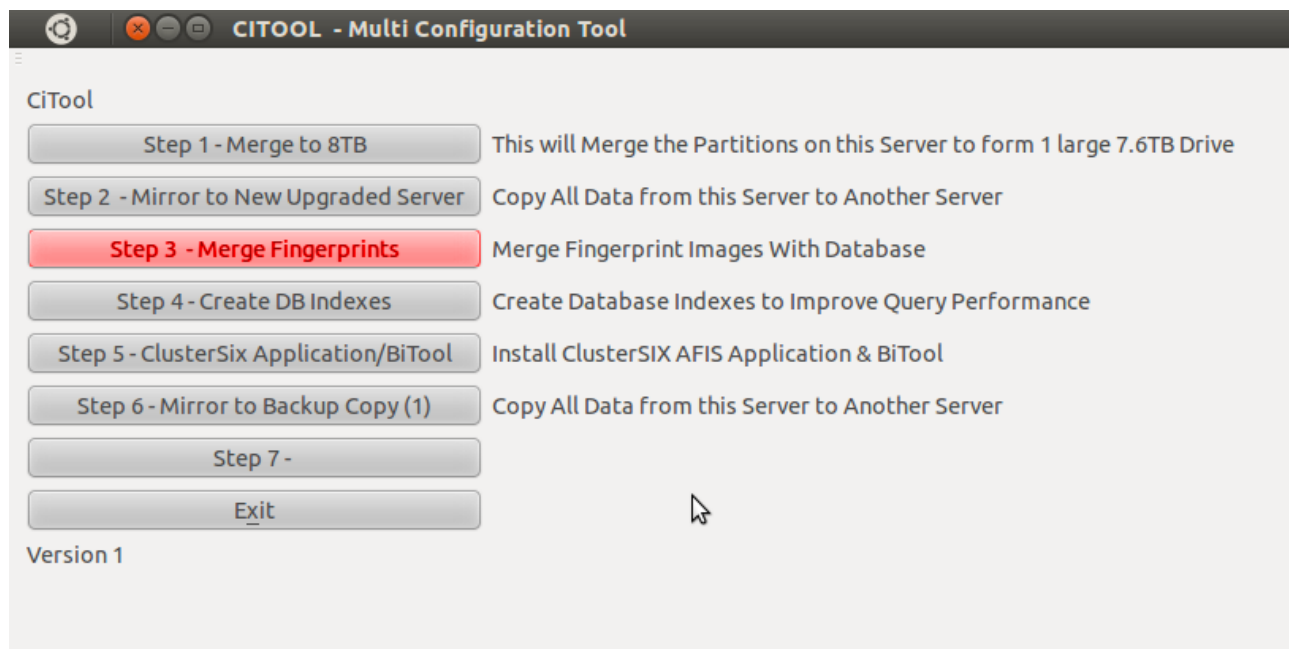

- Connect your Hard Drive that contains the MirroFParchive Folder to the Archive Server
- Wait for it to automatically open
- Navigate to the folder MirroFParchive
- Double Click on “MirroFParchive”
- Click “**mirror\_fp\_archive**” icon
- A prompt will request you to hit the Enter key to continue
- Confirm that the transfer is atleast 50mbps
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

#### 4. Merge FingerPrints Data on the Upgraded Server A (using the CiTool)

- Login to the Upgraded Server A
- Connect your Hard Drive that contains the SmartConsolidate Folder
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 3 – Merge Fingerprints”
- A prompt will request you to hit the Enter key to continue
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

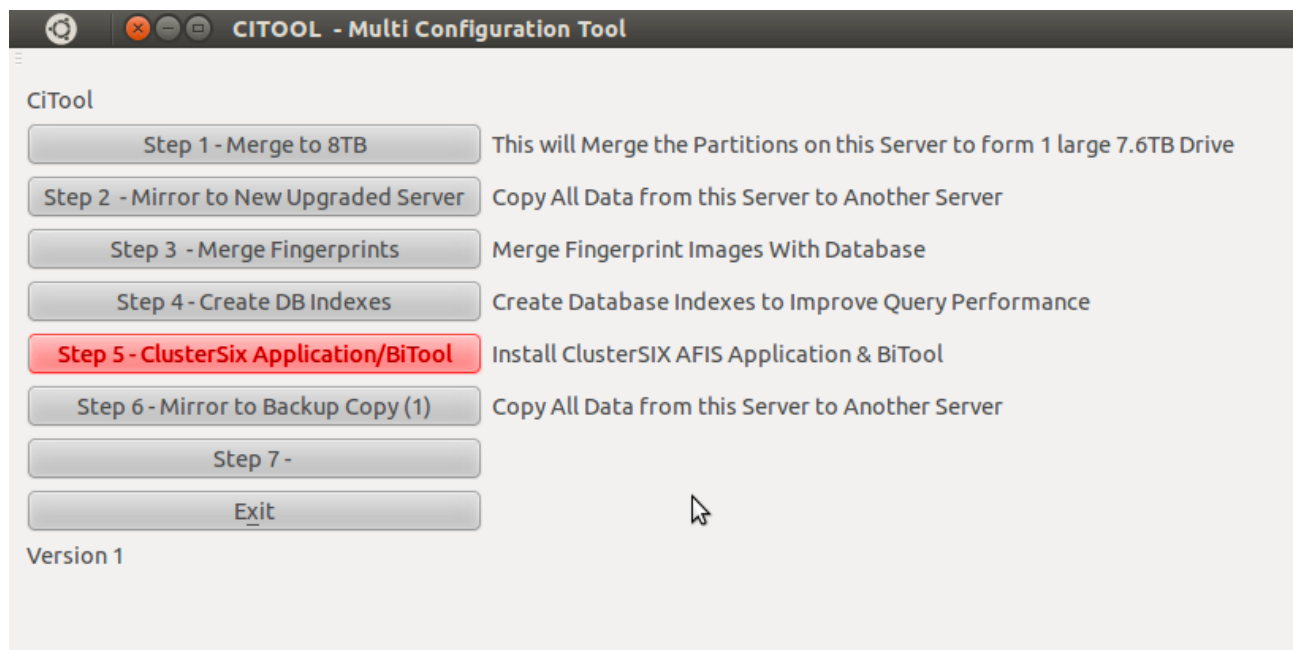

(ON UPGRADED SERVER A)

## 5. Installation of ClusterSix Application/BI tool on the Upgraded Server A (using the CiTool)

- Connect your Hard Drive that contains the SmartConsolidate Folder
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 5 – ClusterSix Application/BI Tool”
- A prompt will request you to hit the Enter key to continue
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close

(ON UPGRADED SERVER A)

## KEY PROCESSES (ON UPGRADED SERVER B)

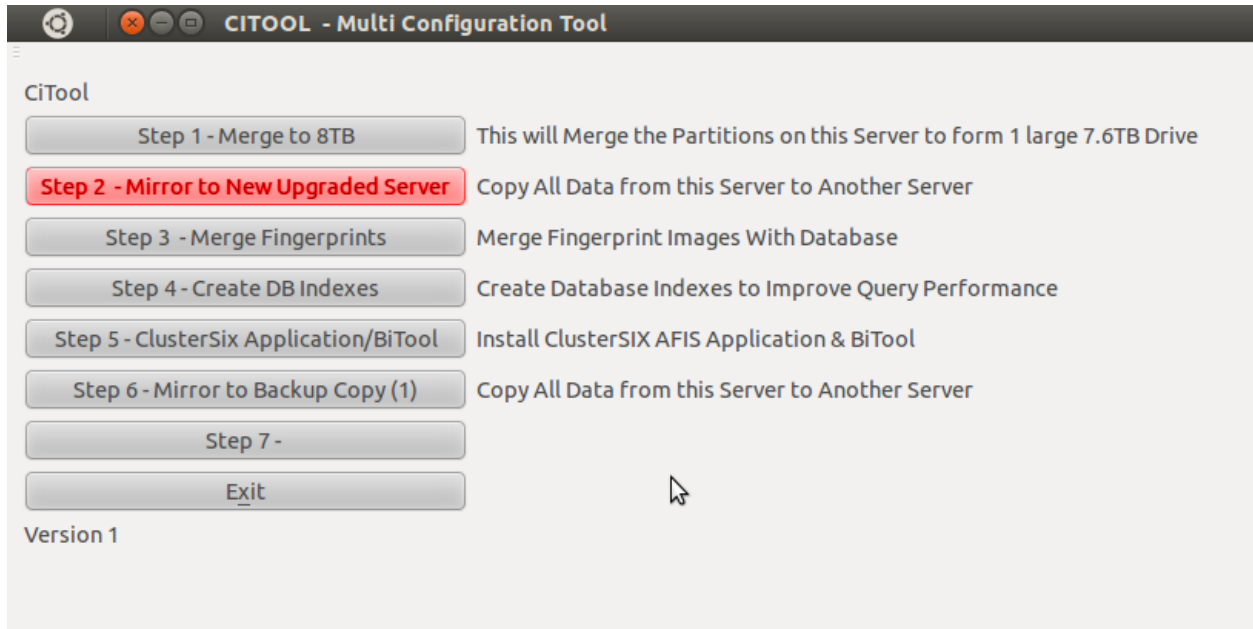

### 1. Configure the IP Address as the First destination Server

- Configure the IP address on the Upgraded Server B as shown above in Configuring IP Address using OPenVR Interface

### 2. Mirror Data From the Upgraded Server A to Upgraded Backup Server B (using the CiTool)

- Connect your Hard Drive that contains the SmartConsolidate Folder to the Upgraded Server A
- Wait for it to automatically open
- Navigate to the folder SmartConsolidate
- Double Click on “citool”
- Click “Step 2 – Mirror to New Upgraded Server”
- A prompt will request you to hit the Enter key to continue
- Confirm that the transfer is atleast 50mbps
- Wait for it to complete. Untill you see another prompt requesting you to hit the Enter key to close
- To confirm if it has mirrored successfully go the the destination Server and reboot the server.
- After reboot it will automatically show you exactly the total registered voters as that of the Upgraded server A displayed on the opevr interface.
